Cara Memblokir Web Bot di AAPanel

Kadang web bot atau spider atau crawler mesin pencari ini sangat mengganggu dan bisa mengakibatkan website down disebabkan trafficnya yang besar, maka terpaksa solusinya adalah memblokir bot yang tidak diperlukan

Apache

Jika anda menggunakan aapanel dengan apache maka anda bisa menggunakan URL Rewrite seperti ini

```
RewriteEngine on
RewriteCond %{HTTP_USER_AGENT} ^.*(semrush|MJ12bot|amazonbot|SCspider|Textbot|s2bot|seznambot-crawler|petalbot|ahrefsBot|Bytespider|Barkrowler|ClaudeBot|linkfluence|BacklinksExtendedBot).*$ [NC]
RewriteRule .* - [F,L]
```

The screenshot shows the AAPanel interface with the 'URL rewrite' tab selected. On the left, there's a sidebar with options like Domain Manager, Subdirectory binding, Site directory, Limit access, Traffic control, URL rewrite, Default indexes, and Config. The main area displays the Apache rewrite rules. A status bar at the top right says 'Rewrite rule converter : Apache to Nginx'.

kemudian block query string

```
#block querystring
RewriteCond %{QUERY_STRING} feeds|feed|rss [NC]
RewriteRule ^ - [F]
```

Nginx

Jika anda menggunakan webserver nginx

```
if ($http_user_agent ~ (semrush|opensiteexplorer|ahrefs|seekport|mj12bot)) {  
    return 403;  
}
```
