Memisahkan Traffic Wordpress https Static Content ke http

Kenapa kita ingin memisahkan traffic static di website wordpress https ke http? penyebabnya karena akses menggunakan http sepertinya lebih cepat dibandingkan https selain itu bisa di cache.

```
acl domain_list hdr_end(host) -i /etc/haproxy/domain

acl static_content path_end -i .jpg .png .gif .css .js .jpeg .ttf
.mp3 .mp4 .zip .pdf
use_backend bk_http if domain_list || static_content
```
