Instalasi NFS Server di Centos 7 1

Pengantar 1

Instalasi NFS Server 1

Instalasi NFS Server di Centos 7

Berikut ini adalah tahapan instalasi nfs server untuk file shared remote di centos 7

Pengantar

Kita asumsikan bahwa kita telah menyediakan 2 server yaitu

1. server-data.jux.in (192.168.0.100)
2. client.jux.in (192.168.0.101)

Instalasi NFS Server

Tahap pertama jalankan

```
yum install nfs-utils -y
```

apabila instalasi sudah selesai, lanjut membuat folder data

```
mkdir /var/data_share
```

```
chmod -R 755 /var/data_share chown nfsnobody:nfsnobody /var/data_share
```

selanjutnya jalankan service nfs agar otomatis aktif setiap kali server reboot

```
systemctl enable rpcbind
systemctl enable nfs-server
systemctl enable nfs-lock
systemctl enable nfs-idmap
systemctl start rpcbind
systemctl start nfs-server
systemctl start nfs-lock
systemctl start nfs-idmap
```
