# Tutorial Install Virtualizor Mode KVM

Berikut ini adalah panduan cara instalasi virtualizor dengan tipe KVM.

## CATATAN

- KVM tidak mendukung sistem operasi 32 bit

## Centos 6.x 64 bit

Sebelum anda melakukan instalasi kvm pastikan anda menginstall beberapa paket pendukung.

## Partisi

Partition	Size	Description
/	80-100 GB	Partisi root berisi file sistem operasi dan template kvm
SWAP	4 GB +	Partisi untuk persiapan apabila RAM anda habis
Storage	Disk space yang akan digunakan untuk pembuatan VPS	This partition can be used to create either <b>Logical Volumes</b> or <b>File Based Storage</b> for the VPS (DomUs). <b>NOTE for LVM</b> : You must NOT create any Logical Volume and MOUNT it. This must be an EMPTY VOLUME GROUP. Virtualizor will not delete any pre-existing LVs in the Volume Group. But its recommended to have an empty Volume Group. <b>NOTE for File Storage</b> : You must create and mount the folder.

## Persiapan

Pertama install paket ini

```
yum install bridge-utils
```

## Setting Bridge
